Professional Profile

Full Stack Developer with over 5 years of experience designing and maintaining distributed systems based on microservices and Node.js. Expert in building complete products (Mobile/Web/Backend) focused on scalability, Clean Architecture, performance optimization, and security best practices. Experienced in leading technical teams, committed to delivering robust, efficient solutions aligned with business objectives. Passionate about solving problems through technology.

Professional Experience

SoyDelivery

Full Stack Developer

April 2025 - Present

- Architecture and implementation of a custom geospatial engine for delivery route optimization, supporting hundreds of simultaneous orders, multi-backend routing (local/remote OSRM + Mapbox), and geocoding via Nominatim/Overpass API, including distance matrix calculation.
- End-to-end development of a delivery lifecycle management system: route assignment and creation, real-time tracking of statuses and drivers, and integration with multiple client APIs. Connected to the financial area and the legacy GeneXus system (Event-Driven Programming), with Excel export and email notifications.
- Orchestration of automated conversational flows through an AI-powered backend focused on customer service. The system identifies user intents, generates automated responses, and manages escalation to human agents via SMS and voice channels (Twilio).
- Real-time monitoring of customer flow at distribution centers: queue state management, integration with physical kiosks, and time-slot assignment for order pickup.
- Messaging infrastructure built with RabbitMQ, distributed persistence, and centralized log management via Elasticsearch.
- Design and implementation of modular React interfaces built for high-operability environments.

Pinealage

Full-stack Developer, IT Lead

June 2025 - Present

- Design and implementation of 3 independent microservices: Users/Subscriptions (PostgreSQL + Prisma), Matchmaking/Gamification (MongoDB + Redis/Bull), and Notifications (FCM + SendGrid via BullMQ).
- Bidirectional real-time communication via WebSockets/Socket.IO for chat and live events.
- Geolocation-based matchmaking logic, native in-app payments (Expo IAP) with receipt validation (Google Play/Apple), and complex forms using React Hook Form + Zod.
- Hybrid Firebase Auth + JWT authentication, token management with Axios interceptors, and state persistence with Redux Toolkit + Redux Persist.
- Automated CI/CD pipeline to App Store and Play Store via EAS.
- Cloud infrastructure on GCP: VMs, Storage, PostgreSQL 15, MongoDB Atlas, and production process management with PM2.
- Admin dashboard (React 18 + Vite) with real-time metrics (Recharts) for user tracking, conversion rates, and business analytics.
- Definition of the technology stack, design patterns, strict typing, and security best practices for the entire team.

ConViven

Project Lead & Co-Founder

March 2024 – June 2025

- Full product development, including a mobile application (React Native/Expo), a web panel (React/Vite), and the backend.
- Process planning and optimization.
- Team coordination, consisting of 2 developers and 2 designers.
- Development oversight and delivery of milestones on schedule.
- Design and implementation of scalable solutions.

Freelancer

December 2023 – April 2025

- Development of scalable technology projects.
- Custom application development.
- Code and architecture improvements applying SOLID principles.
- Performance and load time optimization.
- Notable projects: Social Network (C#, .NET, ASP.NET 7.0 MVC), Inventory Management (C#, MVC, .NET, SQL, REST WebAPI), Poker Game (Java, Expert, Observer, MVC, Strategy).

IBERTRANS SRL

Software Developer

March 2020 – December 2023

- Web application development and design.
- Maintenance and support.
- Diagram creation and technical planning.
- Documentation management.

Academic Background

Universidad ORT Uruguay

- Information Technology Analyst

2023 – 2026 Finalizado

Udemy

- Java Masterclass – Functional programming in Java 8 (Lambda, Stream API)
- iOS & Swift – Swift development, iOS UI, data management, API integration

2023

2023

Technical Skills

- Backend: C#, Node.js, JavaScript (ES6+), TypeScript, .NET Core, .NET Framework, Java, Express.js, NestJS, InversifyJS
- Frontend: HTML5, CSS, React.js, React Native, Expo, Vite, Tailwind, Redux Toolkit
- Databases: SQL Server, PostgreSQL, MongoDB, Firebase, Firestore, Redis
- Architectures & Patterns: Clean Architecture, Microservices, MVC, SOLID, Repository Pattern, Strategy, Observer, Expert, Pipes and Filters
- Cloud: AWS (S3, Lambda, EC2, DynamoDB), GCP (VMs, Storage, PostgreSQL 15, MongoDB Atlas), Cloudflare R2
- DevOps: Docker, Docker Compose, RabbitMQ, BullMQ, GitHub Actions, Azure DevOps, PM2, EAS
- Integrations: Twilio (SMS/voice), SendGrid, FCM, Google Play / Apple IAP, Mapbox, OSRM, Elasticsearch
- Testing: Jest, Cypress
- Tools: Swagger, Postman, Astah, Prisma
- Methodologies: Scrum
